Soft Skills: Problem solving, Time Management, Team Collaboration, Communication Skills, Quick Learning Ability

Projects

1. Lifesolve AI live_link | project_code | server_side_code

- Users can get AI-powered guidance through an AI Chat Assistant and AI Problem Solver, with persistent chat sessions and streaming responses for personalized support.
- Users can connect with other community members through direct messaging and receive notifications for comments, reactions, messages, and other platform activities.
- Users can anonymously or publicly share personal problems, interact with the community through reactions and comments, and manage their own posts across different categories.

2. Micro Learning Hub live_link | project_code | server_side_code

- Students can browse, search, purchase, and enroll in courses, access learning materials, take online MCQ exams, track their learning progress, and participate in the educational Help Desk community.
- Teachers can apply for approval, create and manage courses and online exams, add questions, monitor student performance, and interact with students through educational discussions.
- Administrators can manage users, approve teacher applications, manage courses, monitor platform activities, publish announcements, and control the overall learning platform.

3. Fitness & Gym Management Platform live_link | project_code | server_side_code | Explain_Video

- A comprehensive full-stack fitness management system designed for users, trainers, and administrators to manage fitness activities in a single platform.
- Users can browse and search fitness classes, book sessions through secure Stripe payment integration, and track their booking history in a personal dashboard.
- Trainers can create and manage classes, view enrolled students, and contribute to the community forum by sharing fitness-related posts.
